Application No.: 10/517,665

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (currently amended): An A NOx removal catalyst management unit for use with an

NO<sub>x</sub> removal apparatus, the management unit being provided for managing a plurality of NO<sub>x</sub>

removal catalyst layers provided in a flue gas NO<sub>x</sub> removal apparatus, characterized in that the

management unit comprises NO<sub>x</sub> measurement means for determining NO<sub>x</sub> concentrations on the

inlet and outlet sides of respective NO<sub>x</sub> removal catalyst layers; NH<sub>3</sub> measurement means for

determining NH<sub>3</sub> concentrations on the inlet and outlet sides of the same NO<sub>x</sub> removal catalyst

layers; and percent NO<sub>x</sub> removal determination means for determining percent NO<sub>x</sub> removal  $(\eta)$ 

on the basis of an inlet mole ratio (i.e., inlet NH<sub>3</sub>/inlet NO<sub>x</sub>), the inlet mole ratio being derived

from-an a NO<sub>x</sub> concentration which is-an a NO<sub>x</sub> concentration as measured on the inlet side by

means of said NO<sub>x</sub> measurement means and an NH<sub>3</sub> concentration which is an NH<sub>3</sub>

concentration as measured on the inlet side by means of said NH<sub>3</sub> measurement means; an NH<sub>3</sub>

concentration which is an NH<sub>3</sub> concentration as measured on the inlet side; an NH<sub>3</sub> concentration

which is an NH<sub>3</sub> concentration as measured on the outlet side; a NO<sub>x</sub> concentration which is a

NO<sub>x</sub> concentration as measured on the outlet side: and an evaluation mole ratio which is

predetermined for the purpose of evaluating respective NO<sub>x</sub> removal catalyst layers or plurality

of NO<sub>x</sub> catalyst layers, wherein the percent NO<sub>x</sub> removal (n) is determined on the basis of the

following equation (1):

2

Application No.: 10/517,665

 $\underline{\eta} = \{(\text{inlet NH}_3 - \text{outlet NH}_3) / (\text{inlet NH}_3 - \text{outlet NH}_3 + \text{outlet NO}_x)\} \times 100 \times (\text{evaluation mole ratio}) \\
\text{ratio/inlet mole ratio} \quad (1).$ 

- 2. (canceled).
- 3. (canceled).
- 4. (currently amended):—An\_A NO<sub>x</sub> removal catalyst management unit according to any of claims claim 1 to 3 for use with an a NO<sub>x</sub> removal apparatus, which management unit further includes transmission means for transmitting concentration values determined by the NO<sub>x</sub> measurement means and the NH<sub>3</sub> measurement means to the percent NO<sub>x</sub> removal determination means, wherein the percent NO<sub>x</sub> removal determination means determines the percent NO<sub>x</sub> removal ( $\eta$ ) of respective NO<sub>x</sub> removal catalyst layers included in a plurality of flue gas NO<sub>x</sub> removal apparatuses.
- 5. (currently amended): A method for managing-an a NO<sub>x</sub> removal catalyst for use with an NO<sub>x</sub> removal apparatus, the method being provided for managing a plurality of NO<sub>x</sub> removal catalyst layers provided in a flue gas NO<sub>x</sub> removal apparatus, characterized in that the method comprises determining NO<sub>x</sub> concentrations and NH<sub>3</sub> concentrations on the inlet and outlet sides of respective NO<sub>x</sub> removal catalyst layers; determining percent NO<sub>x</sub> removal (η) on the basis of an inlet mole ratio (i.e., inlet NH<sub>3</sub>/inlet NO<sub>x</sub>); an NH<sub>3</sub> concentration which is an NH<sub>3</sub> concentration as measured on the inlet side; an NH<sub>3</sub> concentration which is an NH<sub>3</sub> concentration as measured

3

Application No.: 10/517,665

on the outlet side: and an evaluation mole ratio which is predetermined for the purpose of evaluating respective  $NO_x$  removal catalyst layers or plurality of  $NO_x$  catalyst layers; and evaluating performance of respective  $NO_x$  removal catalyst layers on the basis of the percent  $NO_x$  removal ( $\eta$ ), the inlet mole ratio being derived from an  $NO_x$  concentration which is an  $NO_x$  concentration as measured on the inlet side and an  $NO_x$  concentration which is an  $NO_x$  concentration as measured on the inlet side; and wherein the percent  $NO_x$  removal ( $\eta$ ) is determined on the basis of the following equation (1):

 $\eta = \{(\text{inlet NH}_3 - \text{outlet NH}_3) / (\text{inlet NH}_3 - \text{outlet NH}_3 + \text{outlet NO}_x)\} \times 100 \times (\text{evaluation mole})$ ratio/inlet mole ratio) (1).

- 6. (canceled).
- 7. (canceled).
- 8. (currently amended): A method according to any of claims claim 5 to 7 for managing an a NO<sub>x</sub> removal catalyst for use with an a NO<sub>x</sub> removal apparatus, wherein the method further comprises performing restoration treatment of an NO<sub>x</sub> removal catalyst layer having a catalytic performance deteriorated to a predetermined level, on the basis of results of performance evaluation of the respective NO<sub>x</sub> removal catalyst layers.
- 9. (currently amended): A method according to claim 8 for managing-an\_a NO<sub>x</sub> removal catalyst for use with-an\_a NO<sub>x</sub> removal apparatus, wherein the performance restoration treatment is replacement of the NO<sub>x</sub> removal catalyst layer with a new NO<sub>x</sub> removal catalyst layer,

Application No.: 10/517,665

replacement of the  $NO_x$  removal catalyst layer with a regenerated  $NO_x$  removal catalyst layer, replacement of the  $NO_x$  removal catalyst layer with an  $NO_x$  removal catalyst layer inverted with respect to the direction of the flow of discharge gas, or replacement of the  $NO_x$  removal catalyst layer with an  $NO_x$  removal catalyst layer from which a deteriorated portion has been removed.

10. (currently amended): A method according to any of claims 5 to 7 and 8 for managing an NO<sub>x</sub> removal catalyst for use with an NO<sub>x</sub> removal apparatus, wherein the method further comprises determining the percent NO<sub>x</sub> removal of respective NO<sub>x</sub> removal catalyst layers included in a plurality of flue gas NO<sub>x</sub> removal apparatuses and evaluating catalytic performance of respective NO<sub>x</sub> removal catalyst layers included in a plurality of flue gas NO<sub>x</sub> removal apparatuses.

## 11. (canceled).

12. (currently amended): A method according to claim 9 for managing-an a NO<sub>x</sub> removal catalyst for use with-an a NO<sub>x</sub> removal apparatus, wherein the method further comprises determining the percent NO<sub>x</sub> removal of respective NO<sub>x</sub> removal catalyst layers included in a plurality of flue gas NO<sub>x</sub> removal apparatuses and evaluating catalytic performance of respective NO<sub>x</sub> removal catalyst layers included in a plurality of flue gas NO<sub>x</sub> removal apparatuses.
